

## FULLY AUTOMATIC FLYER PAYOFF

# FALSTA

- Continuous plant operation through automatic uninterrupted change from empty to full spool
- No time-bound monitoring and operation efforts at spool change
- Constant wire tension over the whole spool runtime through electronically controlled brake
- Smooth transition from empty to full spool by the use of a dancer controlled accumulator
- Design with low-maintenance requirements
- Central parameter and data management with touch screen HMI
- Optional integration in MES and PCS
- Low-maintenance design with sturdy steel construction
